

### Project Description

A soil and groundwater remediation project consisting of the installation of an in-situ treatment system, containment trench and groundwater pumping system was undertaken at the airport. The advantage of the in-situ treatment was that it allowed for soil to be treated at the site without being excavated and transported.

### Scope of Services

FSM Management Group Inc. (FSM Group) planned and developed the environmental remediation approach with environmental consultants and followed through with the management of field construction and implementation of the monitoring program. FSM Group also managed the financial and accounting aspects of the project, and coordination of the insurance claim.

### About Us

FSM Group provides airport fuel and glycol consortium administration services, aviation fuel and glycol infrastructure project and construction management services, engineering and environmental management services, business consulting, and structured finance solutions for aviation fuel, glycol storage and ground fuel facilities at airports throughout North America. We also provide fuel management systems and technology for aviation and ground transportation industries.

FSM Group is a multinational professional services firm with offices in Montréal, Orlando, Toronto, and Vancouver. We are currently managing several airport fuel facility construction projects, either under way or in the planning stage, which combined are valued in excess of \$500 million. For more information, please contact us at (514) 633-8750 or [Info@FSMGroup.ca](mailto:Info@FSMGroup.ca) or visit [FSMGroup.ca](http://FSMGroup.ca).
