## Robert Iasenza

P.Eng., M.Eng.

President  
FSM Management Group Inc.  
Montréal, Québec

Robert Iasenza has a degree in Mechanical Engineering and a Master's degree in Environmental Engineering. Robert has more than twenty years of experience in the design, construction, project management, maintenance and operation of airport fuel systems. In March 2012, Robert was appointed as Vice President of Engineering and Operations, and was Director of Engineering and Environment for seven years. He was appointed as President in January 2016.

Since the start of his career in 1996, Robert has managed airport projects ranging from small technical modifications to the construction of large-scale fuel storage and distribution facilities. Robert also has experience in environmental management and has been involved in major remediation projects. His main function is that of principal project manager for fuel system projects, where he is tasked with overseeing all facets of projects from start to completion.

Robert is also responsible for regular communication and consultation with clients with respect to project reporting and approvals. Reporting to Robert is a well qualified team of junior and intermediate project managers that assist with management and coordination tasks. Numerous international clients have benefited from Robert's experience and collaborative work style.
